Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 10/582,875	Applicant(s) BEHRINGER, THOMAS	
	Examiner PAUL T. CHIN	Art Unit 3652	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 5-8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The recitation of "the tube filling machine an/or for removing tubes" in claim 5 is vague and indefinite. The usage is "and/or" is unclear as to whether applicant is reciting or excluding the limitation.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 5-8, as best understood, are rejected under 35 U.S.C. 103(a) as being unpatentable over Linner (6,733,224) (see PTO-892) in view of Kress (6,439,631) (see IDS).

Linner (6,733,224) discloses a tube handling device for inserting tubes into a tube filling machine, for relocating tubes within the tube filling machine and/or for removing tubes from the tube filling machine, with at least one movable carrier (32,34) having a plurality of tube grippers (41) disposed thereon in at least one gripper row, wherein an adjusting device (fig. 4) is disposed on the carrier, which comprises at least one drive device whose drive motion can be translated by a transfer device (28) into a relative motion of

Art Unit: 3652

the tube grippers (41) along the gripper row, and the drive device being formed by two pneumatic cylinders (45,46) which are oriented parallel to each other in the longitudinal direction of the gripper row and which act in opposite directions. However, Linner (6,733,224) does not teach scissor action arms which can be pulled apart and pushed together using the drive device. However, Kress (6,439,631) teaches a pantograph or scissor arms to adjust the spacing between the grippers. Accordingly, it would have been obvious to those skilled in the art to provide a well known pantograph on the carrier (34) of Linner (6,733,224) as taught by Kress (6,439,631) to conveniently adjust the spacing between the grippers.

Re claims 7 and 8, it would have been obvious to those skilled in the art to optimize the spacing between the grippers and the application of the cylinders to provide an adjustment to a user. Note that the cylinders (45,46) of Linner (6,733,224) would provide a synchronized motion.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
